ACADEMIC PROJECT

Supermarket Billing Software Technology : Java and MySql Duration : 3 months

The supermarket system in Java is a project that maintains the records of sales and billings. The whole system is made in NetBeans IDE. The system has a MySQL database as back-end support. The system supports all the features that are required here in this system. This software project is a traditional supermarket billing system with some added functionality. This system is built for vast data processing and bill generation for supermarket customers. The billing database is a fast collection of product name, price and other product specific data. A product when billed is searched from the database and its price is added to the bill based upon the product quantity. The supermarket billing system is built to help supermarkets calculate and display bills and serve the customer in a faster and efficient manner. This software project consists of an effective and easy GUI to help the employee in easy bill calculation and providing an efficient customer service.
